## What is Physics?

$\square$ Physics is the study of the natural world around us from the very large, such as the solar system, to the very small, such as the atom.

## PHYSICAL QUANTITIES, SI UNITS AND MEASUREMENT

## Chapter 1

## At the end of this chapter...

You should be able to:
$\square$ show understanding that all physical quantities consist of a numerical magnitude and a unit
$\square$ recall the following base quantities and their units: mass $(\mathrm{kg})$, length ( m ), time ( s$)$, current (A), temperature (K)
$\square$ use the following prefixes and their symbols to indicate decimal sub-multiples and multiples of the SI units: nano $(\mathrm{n})$, micro ( $\mu$ ), milli (m), centi (c), deci (d), kilo (k), mega (M)

## At the end of this chapter...

You should be able to:
$\square$ show an understanding of the orders of magnitude of the sizes of common objects ranging from a typical atom to the Earth
$\square$ describe how to measure a variety of lengths with appropriate accuracy by means of tapes, rules, micrometers and calipers, using a vernier scale as necessary
$\square$ describe how to measure a short interval of time including the period of a simple pendulum with appropriate accuracy using stopwatches or appropriate instruments

## Why do We Need to Measure Things?

Let's do this as a class...
Work in groups of two
Compare the length between the elbow to the first finger tip.

## Physical Quantities and SI Units

| Base Quantity | Name of SI unit | Symbol for SI Unit |
| :---: | :---: | :---: |
| Length | metre | m |
| Mass | kilogram | kg |
| Time | second | s |
| Electric Current | ampere | A |
| Temperature | kelvin | K |
| Intensity | candela | cd |
| Amount of Substance | mole | mol |

## Physical Quantities

- A physical quantity when measured may be described in terms of

1. A number
2. Its unit of measurement

## Physical Quantities

- What is your height?
$\square$

## Physical Quantities

$\square$ Mass - unit of measurement, kilogram (kg)

## Physical Quantities

$\square$ Time - unit of measurement, second (s)

## Do You Know???

Diameter of the Sun

$$
\begin{aligned}
& 1400000000 \mathrm{~m} \\
& 1.4 \mathrm{Gm} \text { (gigametre) }
\end{aligned}
$$

Thickness of a strand of hair $0.0002 m$
0.2 mm (millimetre)

## Prefixes for SI units

| Factor | Prefix | Symbol |
| :---: | :---: | :---: |
| $10^{9}$ | giga- | G |
| $10^{6}$ | mega- | M |
| $10^{3}$ | kilo- | k |
| $10^{-1}$ | deci- | d |
| $10^{-2}$ | centi- | c |
| $10^{-3}$ | milli- | m |
| $10^{-6}$ | micro- | $\mathrm{\mu}$ |
| $10^{-9}$ | nano- | n |

## Prefixes Exercise 1

Express the following quantities in their respective Sl unit.
a. One kilometer =

$$
1000 \mathrm{~m} \text { or } 10^{3} \mathrm{~m}
$$

b. One microsecond =
d. One gram

$$
=
$$

One centimeter

| Factor | Prefix | Symbol |
| :---: | :---: | :---: |
| $10^{9}$ | giga- | G |
| $10^{6}$ | mega- | M |
| $10^{3}$ | kilo- | k |
| $10^{-1}$ | deci- | d |
| $10^{-2}$ | centi- | c |
| $10^{-3}$ | milli- | m |
| $10^{-6}$ | micro- | $\mu$ |
| $10^{-9}$ | nano- | n |

## Prefixes Exercise 1

| e. | One miligram |  | $\begin{aligned} & 0.001 \mathrm{~g} \text { or } 10^{-3} \mathrm{~g} \\ & =10^{-6} \mathrm{~kg} \end{aligned}$ | Factor | Prefix | Symbol |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $10^{9}$ | giga- | G |
|  |  |  |  | $10^{6}$ | mega- | M |
| f. | One millisecond | $=$ | 0.001 s or $10^{-3} \mathrm{~s}$ | $10^{3}$ | kilo- | k |
|  |  |  |  | $10^{-1}$ | deci- | d |
| g. | One minute $=$ |  | 60s | $10^{-2}$ | centi- | c |
|  |  |  |  | $10^{-3}$ | milli- | m |
| h. | One hour | $=$ | 3600s | $10^{-6}$ | micro- | $\mu$ |
|  |  |  |  | $10^{-9}$ | nano- | n |

## What does SI units mean?

$\square$ Système International
$\square$ International System of Units

## Measurement of Length

$\square$ The SI unit for length is

$$
\text { metre } \quad \text { m }
$$

$\square$ Other units for length:
millimetre ( mm ), centimetre ( cm ), kilometre (km)

## Measurement of Length

| Range | Suitable <br> Instruments | Accuracy of <br> Instruments |
| :--- | :---: | :---: |
| Several <br> metres (m) | Measuring <br> Tape | 0.1 cm <br> (or 1 mm ) |
| Several <br> centimetres <br> (cm) | Metre/Half- <br> metre Rule | 0.1 cm <br> (or 1 mm ) |
| Between 1 cm <br> to 10 cm | Vernier <br> Calipers | 0.01 cm <br> (or 0.1 mm ) |
| Less than 2 <br> cm | Micrometer <br> Screw Gauge | 0.001 cm <br> (or 0.01 mm ) |

## Measurement of Length

## Measuring Tape

- Length of classroom, car, corridor

$\square$ Metre rule:
$\square$ Length of desk, book

## Measurement of Length

## Parallax Error

What is Parallax Error?
It is the error which arises due to incorrect positioning of the eye.

## Measurement of Length

## Parallax Error

How do we avoid Parallax Error?
$\square$ Always place the eye vertically above the mark being read. OR
$\square$ Place the eye in level with the mark being read.

## Vernier Calipers

$\square$ French scientist Pierre Vernier(1580-1637)

Accuracy: 0.01 cm (or 0.1 mm )

## How to read off the Vernier Caliper?

Reading $=11 \mathrm{~mm}+0.7 \mathrm{~mm}=11.7 \mathrm{~mm}$

## Vernier Calipers Its structure and its application

$\square$ The inside jaws is used to measure internal diameter of test-tube, ring etc.

In main scale, reading $=1.90 \mathrm{~cm}$ in vernier scale, reading $=0.01 \mathrm{~cm}$ the actual reading $\quad=\underline{1.91 \mathrm{~cm}}$

## Vernier Calipers <br> Its structure and its application

$\square$ The outside jaws is used to measure small length, diameter of test-tube etc.

main scale reading $=4.20 \mathrm{~cm}$
vernier scale reading $=0.06 \mathrm{~cm}$
Actual reading $\quad=\underline{4.26 ~ c m}$

## Exercise 1

Reading $=19 \mathrm{~mm}+0.4 \mathrm{~mm}=19.4 \mathrm{~mm}$

## Exercise 2

```
mm
```

Reading $=4 \mathrm{~mm}+0.7 \mathrm{~mm}=4.7 \mathrm{~mm}$

## Exercise 3

MEASURE = $1.8 \mathrm{~cm}+0.06 \mathrm{~cm}$
MEASURE $=1.86 \mathrm{~cm}$

## Exercise 4

MEASURE $=0.7 \mathrm{~cm}+0.03 \mathrm{~cm}$
MEASURE $=0.73 \mathrm{~cm}$

## Exercise 5

Reading $=12 \mathrm{~mm}+0.6 \mathrm{~mm}=12.6 \mathrm{~mm}$

## Exercise 6

Reading $=7 \mathrm{~mm}+0.5 \mathrm{~mm}=7.5 \mathrm{~mm}$

## Vernier Calipers

$\square$ Zero Error (Vernier Calipers)
$\square$ Positive Zero Error

Zero Error $=\quad+0.1 \mathrm{~mm}$
If the observed reading $=32.4 \mathrm{~mm}$, then
Actual measurement $=$ Observed reading - Zero error

$$
\begin{aligned}
& =32.4-(+0.1) \quad \mathrm{mm} \\
& =\quad 32.3 \quad \mathrm{~cm}
\end{aligned}
$$

## Vernier Calipers

$\square$ Zero Error (Vernier Calipers)

- Negative Zero Error

$$
\text { Zero Error }=\quad-0.2 \mathrm{~mm}
$$

If the observed reading $=32.4 \mathrm{~mm}$, then
Actual measurement $=$ Observed reading - Zero error

$$
\begin{array}{ll}
= & 32.4-(-0.2) \\
= & 32.6
\end{array}
$$

## Micrometer Screw Gauge

## Accuracy: 0.001 cm (or 0.01 mm )

-Smaller length, such as diameter of thin wire, thickness of a piece of paper etc can be measured by micrometer screw gauge.

## Micrometer Screw Gauge

| Sleeve reading | $=$ | 3.0 mm |
| :--- | :--- | ---: | :--- |
| Thimble reading $=$ | 0.09 mm |  |
| Reading | $=3.09 \mathrm{~mm}$ |  |
| Reading | $=0.309 \mathrm{~cm}$ |  |

## Micrometer Screw Gauge

| Sleeve reading | $=$ | 5.5 mm |
| :--- | :--- | ---: | :--- |
| Thimble reading $=$ | 0.30 mm |  |
| Reading | $=5.80 \mathrm{~mm}$ |  |
| Reading | $=0.580 \mathrm{~cm}$ |  |

## Micrometer Screw Gauge

| Sleeve reading | $=$ | 3.5 mm |
| :--- | :--- | ---: |
| Thimble reading | $=0.06 \mathrm{~mm}$ |  |
| Reading | $=3.56 \mathrm{~mm}$ |  |
| Reading | $=0.356 \mathrm{~cm}$ |  |

## Exercise 1

Reading $=11.5 \mathrm{~mm}+0.25 \mathrm{~mm}=11.75 \mathrm{~mm}$

## Exercise 2

Reading $=20.5 \mathrm{~mm}+0.22 \mathrm{~mm}=20.72 \mathrm{~mm}$

## Micrometer Screw Gauge

$\square$ Zero Error (Micrometer Screw Gauge)
$\square$ Positive Zero Error

```
Zero Error = +0.02 mm
```

If the observed reading $=2.37 \mathrm{~mm}$, then
Actual measurement $=$ Observed reading - Zero error

$$
\begin{array}{lll}
= & 2.37-(+0.02) & \mathrm{mm} \\
= & 2.35 \quad \mathrm{~mm}
\end{array}
$$

## Micrometer Screw Gauge

$\square$ Zero Error (Micrometer Screw Gauge)
$\square$ Negative Zero Error

Zero Error $=\quad-0.03 \mathrm{~mm}$
If the observed reading $=2.37 \mathrm{~mm}$, then
Actual measurement $=$ Observed reading - Zero error

$$
\begin{aligned}
& =2.37-(-0.03) \\
& =2.40 \quad \mathrm{~mm} \\
& \hline
\end{aligned}
$$

## Measurement of Time

$\square$ Stopwatches are used to measure short intervals of time.
$\square$ Two types:

- Digital stopwatch
- Analogue stopwatch
$\square$ SI unit of time: second, s

## Measurement of Time

| Instruments | Usage | Accuracy of <br> Instruments |
| :--- | :---: | :---: |
| Watch/Clock | hrs, mins, sec | 1 s |
| Analogue <br> Stopwatch | mins, sec | 0.1 s |
| Digital <br> Stopwatch | mins, sec | 0.01 s |
| Atomic Clock | about $10^{-10} \mathrm{~s}$ | - |
| Pendulum Clock | hrs, mins, sec | - |
| Radioactive <br> decay clock | thousand of <br> years | - |

## Measurement of Time

## Watch/Clock

- used fror nmeasurfing laing inntervalls off timme
- most modier in watcines drepend om the vilibratiom of quiartz crystilils to keep binme accuratelly
- the energy that keeps these arystalls vilbratiting commes firanm similll beattery
- mmany watedmes strilll minalke use off coilledl sprivingis to sulpply the meedled ennergy

## Measurement of Time

$\square$ Stopwatch (Analogue/Digital)

- A stopwatch is used to measure short intervals of time.
- stopwatches (analogue and digital)

Analogue Stopwatch accuracy $=0.1 \mathrm{~s}$

Digital Stopwatch accuracy $=0.01 \mathrm{~s}$

## Measurement of Time

$\square$ Atomic Clock

- Atiomic cllock also work on oscilllation.
- The big differemge between a standlard clock in your home and an atiomic cllock is that thee oscilllation in an atiomic clock is between the mucllews of an atiom and the swirrounding ellectrons.

## Measurement of Time

## Pendulum Clock

- clocks make use of a process which is a regularly repeating motion (oscillations), such as the swing of a pendulum
- such oscillations are very regular so period is regular
- most modern clocks depend on the vibration of quartz crystals to keep time accurately
- in clocks that are wound up, elastic potential energy is stored in coiled springs

## What is a pendulum?

$\square$ A small object suspended by a piece of string or tread is called a simple pendulum.
$\square$ The distance from the centre of the pendulum bob to the point of suspension is called the length of the pendulum.
$\square$ One complete to and fro movement of the pendulum is called an oscillation.
$\square$ The time taken for one complete oscillation is called the period.
$\square$ The distance between the rest position of the pendulum and the extreme point of its oscillation is called the amplitude.

## Diagram of a Pendulum

## Finding the Period of a Pendulum

$\square$ To find the period:
$\square$ 1. Take the total time for 20 oscillations.
Why 20?
$\square$ 2. Repeat 2 more times.
$\square$ 3. Calculate the average time for 20 oscillations.
$\square$ 4. Divide by 20 to obtain the period.

What Affects the Period of a Pendulum?
$\square$ Mass?
$x$
$\square$ Amplitude?
$\square$ Length?

## Simple Pendulum

$\square$ When the length increases, the period increases.
$\square$ When the length decreases, the period decreases.
$\square$ When the mass of the bob increases/decreases, there is no effect on the period.

## Simple Pendulum

$\square$ When the amplitude of the bob increases/decreases, there is no effect on the period.
$\square$ When the same experiment is done on the moon, the period increases.

## Pendulum Exercise

The time taken for a pendulum to swing from rest position $A$ to $B$ is 0.8 s . What is the time taken for the pendulum to make 20 oscillations?
