

Worksheet 7.3

Naming compounds and balancing redox equations

1 Name the following compounds.

- a GeO_2
- b Cu_2O
- c CaSO_3
- d KIO_3
- e NaNO_2
- f MnO_4^{2-}
- g VO_2^+
- h SnBr_4
- i K_2CrO_4
- j $\text{Mg}(\text{ClO}_4)_2 \cdot 6\text{H}_2\text{O}$

[10]

2 Write the formulae for the following compounds.

- a copper(I) chloride
- b iron(III) nitrate(V)
- c barium nitrate(III) (also called barium nitrite)
- d tin(IV)sulfate(VI)
- e phosphorus(V) sulfide
- f sodium chlorate(V)
- g magnesium nitride
- h chromium(III) sulfate-18-water (S in sulfate has oxidation number +6)

[8]

3 Write two half-equations for each of the following reactions.

- a $\text{Mg} + 2\text{Ag}^+ \rightarrow \text{Mg}^{2+} + 2\text{Ag}$ [2]
- b $2\text{Br}^- + \text{Cl}_2 \rightarrow \text{Br}_2 + 2\text{Cl}^-$ [2]
- c $2\text{I}^- + \text{H}_2\text{O}_2 + 2\text{H}^+ \rightarrow \text{I}_2 + 2\text{H}_2\text{O}$ [2]
- d $3\text{Cu} + 8\text{H}^+ + 2\text{NO}_3^- \rightarrow 3\text{Cu}^{2+} + 2\text{NO} + 4\text{H}_2\text{O}$ [2]
- e $\text{Cr}_2\text{O}_7^{2-} + 6\text{I}^- + 14\text{H}^+ \rightarrow 2\text{Cr}^{3+} + \text{I}_2 + 7\text{H}_2\text{O}$ [2]

4 Use the oxidation number method to balance the following equations. Show all oxidation numbers and all oxidation number changes.

- a $\text{Co}^{2+} + \text{Cl}_2 \rightarrow \text{Co}^{3+} + \text{Cl}^-$ [5]
- b $\text{Fe}^{3+} + \text{Zn} \rightarrow \text{Zn}^{2+} + \text{Fe}^{2+}$ [5]
- c $\text{Al} + \text{H}^+ \rightarrow \text{Al}^{3+} + \text{H}_2$ [5]
- d $\text{MnO}_4^- + \text{SO}_3^{2-} + \text{H}^+ \rightarrow \text{Mn}^{2+} + \text{SO}_4^{2-} + \text{H}_2\text{O}$ [6]
- e $\text{AsO}_3^{3-} + \text{Zn} + \text{H}^+ \rightarrow \text{AsH}_3 + \text{Zn}^{2+} + \text{H}_2$ [6]
- f $\text{I}_2 + \text{OH}^- \rightarrow \text{I}^- + \text{IO}_3^- + \text{H}_2\text{O}$ [6]

Hint: In part f some of the iodine is oxidised to IO_3^- ions and some is reduced to I^- ions. You balance the oxidation numbers by considering the ratio of these two ions. A reaction in which a substance oxidises and reduces itself is called a **disproportionation reaction** (see page 186 of the Coursebook).
